Subject: Application for the Senior Laravel Developer position at ILIAS Solutions

Dear Hiring Team,

I am writing to apply for the Senior Laravel Developer position at ILIAS Solutions. Your description of a small, independent team building systems from the ground up, with real ownership over design decisions, closely matches how I already work and what I am looking for.

I have worked with PHP for over 10 years, including Laravel, Symfony and CodeIgniter, alongside strong SQL/MySQL experience. Since 2013 I have designed and built, on my own, Balafon, an open-source PHP framework (REST, MySQL, SQLite, MongoDB, Git), officially copyright-registered and published on GitHub. It is a concrete, inspectable example of building a non-trivial system from scratch, including its APIs, database layer and architecture decisions.

At Treenity Solutions (2017-2021), I developed and maintained PHP web applications and handled MySQL administration and Git/GitLab-based workflows in Agile/Scrum teams. On the FedPOL (Belgian Federal Police) mission, I took part in migrating a PHP web application from development to production under strict security requirements, within a 4-person team, using CodeIgniter, REST and MySQL.

I hold a Bachelor's degree in industrial computing (networks and telecommunications), and I am comfortable working in evolving, less structured environments, since that is largely how I have built Balafon over the years.

I would welcome the opportunity to discuss how my background could contribute to ILIAS Solutions' platform.

Best regards,

Charles Bondje Doue
